EARTH LIVE LOOP

Earth live loops are used to enhance the level of security offered by an electric fence by detecting attempted separation of fence wires. By creating a connection between 2 live wires and leaving just enough room for natural movement of the earth wire, the alarm will sound as the earth wire touches the earth live loop.

Features:

- Installed onto the fence wire, generally on the live wires
- Easy to retrofit onto an existing electric fence

Specifications:

Material	Hardened steel
Finish	Heavy galvanised

Stock Code	Description
EY-1LOOP/EL	Earth Live Loop
